

## Information Resources - Implant Dentist Checklist

The following checklist will help you to find the right Implant Dentist for you. It is a good idea to print out and take this list with you when first consulting with a prospective dentist for Dental Implant procedures. The relationship with your Implant Dentist is a shared responsibility. While the doctor should explain each treatment option in detail, including its benefits and drawbacks, it's important that you tell your dentist about yourself, your needs and the results you're looking for. Ask the dentist and office staff as many questions as needed to help you understand the recommended treatment.

Dr. \_\_\_\_\_ Date Visited: \_\_\_\_\_

Practice Name: \_\_\_\_\_ Phone: ( \_\_\_\_ ) \_\_\_\_\_

Address: \_\_\_\_\_

1. When you first call for a consultation, does the person who answers treat you courteously and with respect?
2. Are you provided with a timely appointment?
3. What is the Implant Dentist's educational background?
4. How many years in practice?
5. Does the dentist carry malpractice insurance?
6. What are the dentist's additional education/training, memberships, and accreditation in Implant Dentistry?
7. Are Before and After Photos available for your type of procedure(s)?
8. Are the majority of procedures performed by the practice Implant procedures?
9. May you contact a patient who has had your type of procedure performed?
10. Are payment terms and/or financing available? What are the terms?
11. If insured, is your type of insurance accepted?
12. Is information provided about fees and payment plans before treatment is scheduled?
13. What arrangements are made for handling emergencies outside of office hours?
14. How many Dental Implants are placed yearly by this practice?
15. Will you be properly consulted regarding your dental problems and offered sound treatment options and solutions?
16. Is your prescribed treatment comprehensive, prioritized into phases, and planned over a reasonable period of time?
17. Does the doctor use modern diagnostic and treatment technology? (as example: digital diagnostic cameras and imaging software; magnification and fiber optics; digital x-ray imaging; micro-abrasion and adhesive bonding.
